Situation:

Due to a manufacturing defect, DSO/MSO 6000 Series oscilloscopes may fail. The symptom will be that the oscilloscope will not boot. Please note that if the oscilloscope does boot, the measurements are not affected in any way.

Solution/Action:

If the oscilloscope is under warranty, replace the entire system board (p/n 54662-66506).

If the oscilloscope is out of warranty, verify that the serial number of the oscilloscope is listed on the first page of this service note. If the serial number is listed, then check the serial number on your warranty data base to see if the system board was previously replaced.

If the system board was previously replaced, then the customer pays for the repair even if it is another system board replacement. If the system board was never replaced before, then replace the system board (p/n 54662-66506) and charge the cost of material and labor to extended warranty.

PLEASE NOTE: This service note only applies if the customer has an oscilloscope that WILL NOT BOOT and has not had the oscilloscope repaired in the past!
